

SINGLE WIND TURBINE

Public Exhibition on 20 October 2011

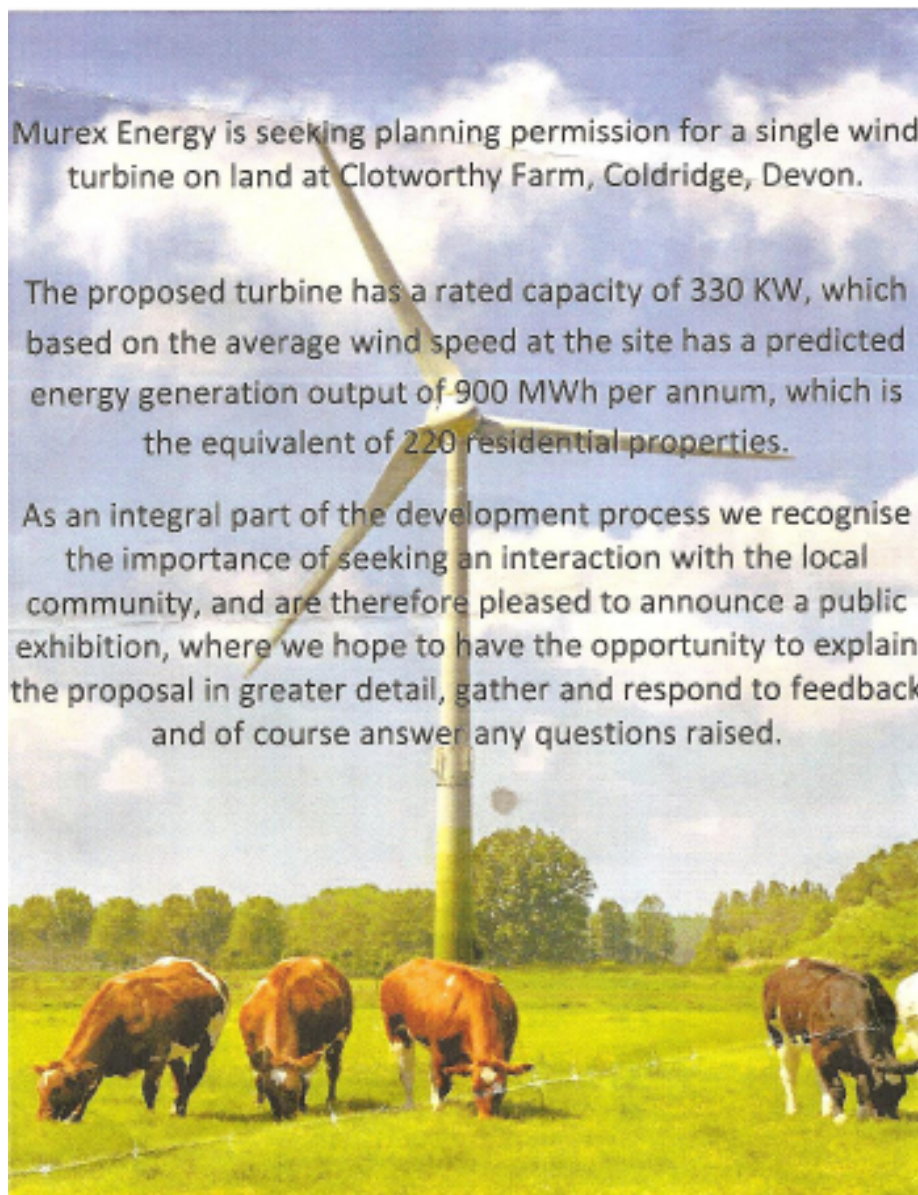

7.00pm – 9.00pm at Coldridge Village Hall

220 FT. HIGH.

Murex Energy is seeking planning permission for a single wind turbine on land at Clotworthy Farm, Coldridge, Devon.

The proposed turbine has a rated capacity of 330 KW, which based on the average wind speed at the site has a predicted energy generation output of 900 MWh per annum, which is the equivalent of 220 residential properties.

As an integral part of the development process we recognise the importance of seeking an interaction with the local community, and are therefore pleased to announce a public exhibition, where we hope to have the opportunity to explain the proposal in greater detail, gather and respond to feedback and of course answer any questions raised.

We welcome any feedback or questions prior to the event at environment@aardvarkem.co.uk or on 01984 624989.
